Aleksandr Polikarpov

Junior Backend / Full-Stack Developer — Node.js & TypeScript

Haifa, Israel | aleksandr.polikarpov@yahoo.com | +972 54-330-1091 | LinkedIn | GitHub

Israeli citizen & new immigrant (Oleh, 2023) — fully eligible to work in Israel, no sponsorship required.

SUMMARY

Junior Backend / Full-Stack Developer focused on Node.js, TypeScript, PostgreSQL and MongoDB, with a 10+ year background in operations and investment analysis. Designed and shipped two production-style projects end to end — a layered procurement REST API and a live, deployed multi-provider forecast-accuracy service (see Projects). Builds with agentic AI tooling (Claude Code) in a plan-review-approve workflow, owning every change. Recent experience building internal Node.js / TypeScript prototypes alongside stakeholder-liaison and QA work.

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), TypeScript, SQL, HTML5/CSS3. Familiar with: Java.
- **Back-end:** Node.js, Express, Fastify, REST APIs, JWT authentication, asynchronous programming & streaming, Prisma. Familiar with: Java/Spring Boot.
- **Front-end:** React, Vite, Tailwind CSS, Recharts, responsive interfaces.
- **Databases:** PostgreSQL, MongoDB (Mongoose), Prisma, schema design, transactions, parameterized queries.
- **Cloud & Tooling:** Neon & MongoDB Atlas, Render, Docker / docker-compose, GitHub Actions (CI/CD), Jest, Supertest, Postman, Git & GitHub.
- **AI-assisted development:** Claude Code (agentic AI coding) as a primary development tool — plan-review-approve workflow, owning and reviewing every change.

PROJECTS

procure-api — Procurement management REST API github.com/alpo1/procure-api

- Backend REST API (13 endpoints) in Node.js, TypeScript and Express on a layered architecture (routes → controller → service → repository), applying SOLID and separation of concerns.
- JWT authentication with bcrypt hashing and role-based access control (buyer / admin) via custom middleware; request validation with zod; parameterized queries throughout (SQL-injection safe).
- Dual-database design: PostgreSQL (Neon) for the transactional core — suppliers, orders and line items with foreign keys, created in a single all-or-nothing transaction — and MongoDB (Atlas) for an append-only audit log.
- Streaming CSV import/export that never buffers the file in memory (constant memory regardless of size); integration tests (Jest, Supertest); Docker / docker-compose; GitHub Actions CI runs build + tests on every push.

weather-verify — Forecast-accuracy service (live, deployed) live demo · github.com/alpo1/weather-verify

- Full-stack TypeScript monorepo (npm workspaces): a Fastify + Prisma / PostgreSQL API and a React 18 + Vite + Tailwind + Recharts frontend, sharing types through a common package. Deployed live on Render.
- Integrates three external weather providers (Open-Meteo, WeatherAPI, Gismeteo) behind a pluggable adapter registry — normalizing REST responses and HTML scraping (cheerio) into one unified shape, so adding a provider is a single entry.
- Automated daily collection via node-cron plus a GitHub Actions cron trigger, with resilient per-provider error handling (one provider failing never breaks the others) and graceful upstream rate-limit handling; JWT auth (httpOnly cookie), zod validation.
- Computes forecast error (MAE) by provider and by lead time; frontend presents a comparison table and error-by-lead-time charts.

PROFESSIONAL EXPERIENCE

Technical Support / IT Assistant — Alef Farbstein Enterprise & Investment Mar 2025 – Jul 2026

Haifa, Israel · Part-time

- Initiated and built internal prototypes in Node.js / TypeScript and React on the founder's interest — REST back-ends with JWT authentication and relational / document database design, and a data-collection and analysis service — taking them to working demos; several were paused as company priorities shifted.
- Acted as technical liaison between business stakeholders and the development team — gathered, analyzed and translated requirements and feedback for new website features.
- Performed QA testing on new features before deployment; reported bugs and verified fixes, working closely with developers throughout the cycle.
- First-line IT support, network troubleshooting and user-access management across the Haifa and Tel Aviv offices.

Earlier Career — Investment & Procurement Management — Moscow Metro · FSUE RADON 2014 – 2022

Moscow, Russia · Full-time

- Owned procurement, investment planning and financial / economic modeling for large logistics and industrial operations — managing budgets, KPIs and high-value supplier contracts.
- Coordinated cross-functional project delivery under strict deadlines; promoted to department head within six months for strong delivery.

Telecom Systems Administrator — State University of Management 2010 – 2012

Moscow, Russia · Full-time

- Administered Windows / Windows Server environments, networks and infrastructure; managed user accounts, access credentials and automated backup / recovery systems.

EDUCATION & TRAINING

Professional Certificate — Full-Stack Developer (Node.js / Java) Feb 2024 – Jun 2025

Tel-Ran Educational Center, Israel

- Full-time program covering Node.js, Express, SQL, React and TypeScript, plus Java/Spring. Final grades 95 / 90.

Master's Degree in Management — Transport Organization Management 2008 – 2013

State University of Management, Moscow, Russia

Languages: Russian - Native; English - Conversational fluency; Hebrew - Basic.
